

Product Requirements Document (PRD)

App: Provou Levou — TikTok Shop in-house integration for Cacife Brand

App ID (service): 7687905207817291541 **App key:** 6lbelvqk6coik

Developer: Provou Levou / Quantic (seller in-house developer) **Market:** Brazil (local seller)

Seller: Cacife Brand — Shop ID 7496183196441545497

Product URL: <https://cacife.quanticsolutions.com.br> **Redirect URL:**

<https://cacife.quanticsolutions.com.br/tiktok/callback>

Version: 1.0 **Date:** 2026-09-26

1. Purpose

Cacife Brand sells on several channels (TikTok Shop, Shopee, Mercado Livre and its own Nuvemshop store). This in-house app connects the seller's TikTok Shop to the seller's private management dashboard so the team can see, in one place, sales, net settlement, order status, top products and returns across channels. The app is **read-only**, used by a **single seller (the app owner)** and is **not distributed** to other sellers.

2. Key use cases

- **Consolidated sales view:** revenue, number of orders and average ticket for TikTok Shop, side by side with the other channels, for a selected period (today, 7/30/90 days, month, custom).
- **Net settlement:** net payout per order and per period (Finance / statement transactions) to compare gross vs net revenue.
- **Order follow-up:** list of recent orders with status (awaiting shipment, shipped, delivered, cancelled) to support daily operations.
- **Top products:** ranking of best-selling products (units and revenue) using product names/SKUs.
- **Returns & refunds:** number and amount of returns in the period, to monitor return rate.
- **Internal assistant:** the same data feeds an internal WhatsApp assistant that answers questions from the store owner only (read-only).

3. Scope of API usage (requested scopes)

Scope / API family	Endpoints (v202309)	Why we need it	Write?
Authorization	GET /authorization/202309/shops	Identify the authorized shop and obtain shop_cipher used by every other call.	No
Order	POST /order/202309/orders/search; GET /order/202309/orders	Sync orders (id, status, create/update time, amounts, line items) into the seller's dashboard.	No
Product	GET /product/202309/products/{id}; POST /product/202309/products/search	Product names/SKUs for the top-products ranking.	No
Finance	GET /finance/202309/orders/{order_id}/statement_transactions; GET /finance/202309/statements	Net settlement (payout) per order to compute net revenue.	No
Return & Refund	POST /return_refund/202309/returns/search	Returns count and refunded amounts for the returns KPI.	No

No endpoint that creates, updates or deletes data on TikTok Shop is called. No messaging, no fulfillment actions, no product changes.

4. Data flow

- **Authorization:** the seller opens the app's connect link → TikTok Shop authorization page → callback to our server with the auth code → server exchanges it for access/refresh tokens (auth.tiktok-shops.com /api/v2/token/get) → tokens stored encrypted at rest in the seller's private database (Supabase, service role only). Tokens are refreshed automatically before expiry.
- **Sync:** a scheduled job (daily) and an on-demand button call the Order, Product, Finance and Return endpoints for the selected time window, normalize the data (amounts in BRL, timestamps in UTC) and upsert it into the seller's database tables (tiktok_orders, tiktok_order_items, tiktok_returns).
- **Presentation:** the seller's dashboard (login required, Supabase Auth) reads the database and renders KPIs, charts and lists. The dashboard never calls the TikTok API directly from the browser; all calls are server-side with the stored token.
- **Retention & privacy:** only order, product, finance and return data of the seller's own shop is stored. Buyer personal data is not used for marketing and is not shared with third parties. Data can be deleted on request by the seller (app owner).

5. Key features (what the reviewer will see)

Screen / tab	Feature	Source data
Visão Geral	Consolidated revenue, net and orders per channel + total, period selector	Orders + Finance
TikTok Shop > Resumo	KPIs: revenue, net settlement, orders, average ticket; daily sales chart	Orders + Finance
TikTok Shop > Pedidos	Recent orders with status and amounts	Orders
TikTok Shop > Produtos	Top-selling products (units, revenue)	Orders + Product
TikTok Shop > Devoluções	Returns count and refunded amount in the period	Return & Refund

6. Testing instructions

- Open <https://cacife.quanticsolutions.com.br> and log in with the test account provided in the review form.
- Open "Métricas". The "Visão Geral" tab shows the consolidated numbers; click the "TikTok Shop" tab.
- Check Resumo / Pedidos / Produtos / Devoluções. Use the period selector (7 / 30 / 90 days) and the "Atualizar" button to trigger a sync.
- Nothing is written to TikTok Shop during the test.

7. Security

- Tokens and app secret are stored only on the server (environment variables / private database); never exposed to the browser.
- OAuth callback validates a signed, time-limited state parameter; only the seller's own shop ID is accepted.
- Dashboard access requires authentication; API routes require a logged-in session or an admin token.
- All traffic over HTTPS.
